RCG Information Technology Improves Solution Portfolio

Edison, NJ, March 6, 2008 – As the information technology industry continues to evolve and new innovations are being introduced, RCG Information Technology, Inc. (www.rcgit.com) has enhanced its Solution Portfolio in order to keep up with such changes. In accordance with the recent emphasis on business requirements within IT solutions, RCG IT's Solution Portfolio has implemented new changes within the Development & Integration practice as well as the QA & Software Testing practice.

“By utilizing our Solution Portfolio approach, our clients can rest assured that the IT solution that is being implemented will match and be in conformity with their most critical business requirements, which will lead to the best possible results,” said RCG IT President and CEO, Robert Simplot.

The Development & Integration practice involves three offerings which include: Services Oriented Architecture, Service Based Blueprinting, and Component & Application Development. By exposing key business processes that were typically locked in internal systems, the enterprise can discover a number of new and exciting opportunities to prosper.

RCG IT's QA & Software Testing practice deals with four offerings which include: Best Practices, Q/A Testing Methodology, Software Testing and Test Automation. These solutions provide direction, planning, documentation and closure to help an IS organization manage and deploy defect-free applications, enhancements and maintenance releases cost-effectively with minimal risk and maximum confidence.

The Development & Integration practice as well as the QA & Software Testing practice are two of five categories in RCG IT's Solution Portfolio, the others being Business & Technology Planning, Project Management, BI & Data Delivery, and Application Management.
